

Vrunda Shah

Content Designer and Illustrator

I am a Content Designer and Illustrator who loves turning complex ideas into simple, efficient, and user-friendly experiences. I believe that good design shouldn't just look nice, but truly resonate with the user. By combining clear writing and intuitive designs, I want to help people navigate spaces that feel easy and seamless from the very first click.

Onboarding Guide: AI Ad Generator

Project: AI-Powered Realtor Ad Generator
Goal: Guide first-time realtors through creating a custom brand ad campaign.
Audience: Busy realtors who may not have graphic design or AI technical expertise.

AI Ad Generator: Quick Start Guide

Welcome! Here’s a simple walkthrough to help you create your first ad using our AI Ad Generator. No design experience needed, we’ll guide you step by step.

1. Set Your Brand Style

Before you start, let the AI learn your brand look.

- **Choose your colours:** Go to **Design Preferences** and pick the colours you use for your brand. Not sure what they are? **Try Auto-Detect**, it pulls your colours straight from your website.
- **Pick your font:** Select a style that feels like “you,” whether that’s something clean and modern or classic and formal.

2. Add Your Campaign Details

Next, tell the AI what your ad is about.

- Your message: Write a short 1–2 sentence summary of what you’re promoting. Tip: You don’t need perfect wording, just add the key points (like “3-bedroom home with a pool”). The AI will refine it for you.
- Ad size: Choose where the ad will appear, like an Instagram Story, Facebook Feed, or a print flyer. The layout will automatically adjust to match the format you select.

3. Generate Your Templates

Now the fun part.

- Click **Generate Ad**. The AI will mix your colors, message, and size to create three ready-to-use templates.
- Review your options: Scroll through the designs to see what you like.
- Make quick edits: Want to change a photo or rewrite a headline? Tap **Quick Edit** on any template to adjust it instantly.

4. Export and Share

Once you’re happy with your design:

- Click **Finalize** to save your ad.
- **Download** a high-resolution file for digital or print.
- Or **share directly** by connecting your social accounts and posting straight from the app

Sample 2

FAQ: IBD Gut Health App

Project: Releaf - IBD Gut-Companion App
Goal: Help IBD patients track their symptoms and have a personal diary for their health
Audience: Individuals managing chronic illness who value privacy and ease of use.

Your Data & Privacy

Where is my health data stored?

Your information stays private. Everything you log is saved on your own phone, and no one else can see it. The only time anyone gets access is if you choose to save it online or share it.

How do I back up my logs if I get a new phone?

If you want to keep your history when switching phones, go to **Settings → Account → Backup**. This will save a secure copy of your data online. Then, when you sign in on your new phone, your logs will automatically appear again.

Understanding Your Trends

How does the “Trigger Finder” work?

Trigger Finder looks at what you eat and how you feel to spot patterns. For the best results, try logging one meal and one symptom a day for about two weeks.

Here’s what the colors mean:

- Green → Foods that usually show up on days you feel better
- Yellow → Foods that appear more often on days when your symptoms act up

Why hasn’t my Insights report shown up yet?

The app needs enough entries to understand what’s going on. If it’s been two weeks and nothing has appeared, check that you’ve logged both:

- What you ate
- How you felt that day

Daily Usage

What is “Flare Mode”?

Flare Mode is for days when you're not feeling your best. It makes the screen simpler and gives you just three quick logging options: **Pain, Hydration, and Medication**. You can turn it on by tapping the moon icon on the home screen.

Can I export my data for my doctor?

Yes! **Go to Trends → Export Report**, choose the dates you want, and the app will create a clean, easy-to-read PDF you can share with your doctor.

Breaking Down a Complex Problem

Project: RBC SaveUp – Financial Planning Web App
Goal: Helping users understand how their daily spending impacts long-term goals.
Audience: Users who feel overwhelmed by their bank balance and don't know where their money is going.

How SaveUp Helps You Understand Your Money

Managing money is a real deal, not just about numbers but clarity for your future. When everything sits in one big account, it’s hard to know what is actually needed for you to set yourself up in a good position for the long-run.

SaveUp solves this by organizing your money into easy-to-understand parts.

1. Clear Categories for Your Money

Instead of showing you one large balance, SaveUp separates your money into simple categories based on your goals and upcoming expenses.

The Problem:

People often overspend because their full account balance looks bigger than what they can actually use.

How SaveUp Helps:

Every dollar is assigned to a purpose, like rent, groceries, emergency savings, or a trip you’re planning. This gives you a clear picture of what’s truly spendable, so you don’t use money that was meant for something important.

2. Automatic Tracking When You Spend

SaveUp connects your real bank transactions to the goals you’ve set, so you always know where your money is going.

The Problem:

It’s easy to forget your budget the moment you tap your card.

How SaveUp Helps:

When you make a purchase, the app automatically matches it to the right category. If you buy takeout, your “Food” spending updates right away. You can see the impact instantly,

3. Simple Visuals That Show Whether You’re on Track

Instead of long spreadsheets or complicated charts, SaveUp uses clear visuals to help you check your progress in seconds.

The Problem:

Most budgeting tools are too overwhelming and slow to interpret.

How SaveUp Helps:

- Your goals are shown visually:
- If you’re on track, your progress bar moves upward.
 - If you’ve been spending more than expected, the bar drops.
 - Helps you think long-term
